PROFESSIONAL SUMMARY

Results-driven BS Artificial Intelligence student with hands-on experience building machine learning models, AI-powered applications, and data-driven solutions using Python. Proficient in the full ML workflow — from data preprocessing and feature engineering to model training, evaluation, and deployment. Experienced in NLP, computer vision, predictive analytics, and web development. Seeking an internship or junior role to apply technical skills to real-world AI, data, and software engineering challenges.

EDUCATION

BS Artificial Intelligence — NFC Institute of Engineering & Fertilizer Research	2023 – Present
Intermediate (Pre-Engineering) — Punjab College	2021 – 2023
Matriculation (Science) — La Salle High School & College	2019 – 2021

TECHNICAL SKILLS

Programming Languages:	Python, SQL, HTML5, CSS3
Machine Learning / AI:	Supervised & Unsupervised Learning, NLP, Computer Vision, Predictive Analytics, Feature Engineering, Model Evaluation
Libraries & Frameworks:	Scikit-learn, XGBoost, Pandas, NumPy, Matplotlib etc.
Web Development:	HTML5, CSS3, JavaScript (basic), Flask (basic), Responsive Design
Tools & Platforms:	GitHub, Kaggle, Google Colab, Jupyter Notebook, VS Code, Netlify

PROJECTS

AI-Powered Fraud Detection System

- Built an end-to-end machine learning pipeline to classify fraudulent financial transactions using XGBoost with log-transform and balance-error feature engineering, achieving strong precision-recall performance on imbalanced datasets.
- Implemented a Flask web application with a dark-themed frontend UI to serve real-time predictions, replicating the full preprocessing pipeline from training to inference.
- Applied label encoding, feature scaling, and class imbalance techniques (SMOTE/threshold tuning) to improve model robustness on rare fraud patterns.
- Technologies: Python, XGBoost, Scikit-learn, Pandas, Flask, HTML/CSS | GitHub: [<https://github.com/Khuzaima-momin/FraudGuard-AI>]

AI-Powered Resume ATS Scoring & Screening System

- Developed an NLP-based resume screening tool that parses resumes, extracts keywords, and computes an ATS compatibility score against a provided job description.
- Implemented keyword matching, skill gap analysis, and scoring logic to rank candidates and generate actionable feedback for resume improvement.
- Designed a clean, user-friendly web interface for uploading resumes and viewing ranked results.
- Technologies: Python, NLP, Scikit-learn, HTML/CSS, Flask | GitHub: [<https://github.com/Khuzaima-momin/resume-screening-system>]

Personal AI Assistant

- Designed and developed a Jarvis AI Assistant using Python and Flask** to automate user interactions through voice/text commands, web/app control, note management, weather updates, and PDF-based query handling.

- **Integrated multiple technologies including speech recognition, text-to-speech, external APIs, database management, and a structured frontend/backend architecture** with reusable modules, templates, and static assets to build a scalable AI-powered assistant system.
- **Addressed implementation challenges such as command recognition reliability, API response handling, modular code organization, and document-processing workflows**, successfully delivering a smart assistant that enhanced productivity, automation, and real-time user support. | GitHub: [<https://github.com/Khuzaima-momin/personal-assistant>]

Health & Lifestyle Blogging Platform

- Designed and deployed a responsive health and lifestyle blogging website with a clean UI, optimized for SEO and mobile viewing.
- Implemented content management features, navigation structure, and layout using HTML5, CSS3, and JavaScript.
- Technologies: HTML5, CSS3, JavaScript, Netlify | Live: [<https://steady-rugelach-c4d662.netlify.app/>]
-]
